The Board of Public Utilities Releases Water Quality Report

CHEYENNE, WY – Access to reliable, safe drinking water is essential to a community’s health, vitality and economy. According to the City of Cheyenne Board of Public Utilities’ (Board) 2019 Consumer Confidence Report (CCR), also known as a water quality report, Cheyenne’s drinking water continues to be safe and water quality meets or exceeds federal and local drinking water standards. In other words, Cheyenne’s drinking water is better than the drinking water standards established by the U.S. Environmental Protection Agency (EPA).

The CCR is a federally mandated report providing information about where Cheyenne’s water comes from and how the treated water compares to the federal rules regarding drinking water quality. The Board publishes this report annually with the results of water quality analyses conducted in accordance with the Safe Drinking Water Act. The Board has published the report online and can be viewed at www.cheyennecity.org/ccr. Customers who would like to receive a printed copy of the report may call customer service at 307.637.6460.

What makes Cheyenne’s drinking water safe? The City’s drinking water is safe because multiple agencies, along with Board employees, work together to protect this resource while making it safe for consumption. Cheyenne’s water sources are protected by the EPA, U.S. Forest Service, Wyoming State Engineer’s Office, Wyoming Department of Environmental Quality, Wyoming State Parks, Laramie County Conservation District, U.S. Army Corps of Engineers and the Board. The Board’s water treatment plant operators monitor Cheyenne’s water system and treatment processes around the clock every day and distribution and lab crews monitor and protect water quality as it is delivered to homes and businesses. Every day, water connects us all.
