Seminole Storage	15,700	11,560	73.6%	9,394	59.8%

Not all the water stored in these reservoirs is readily available for our use in Cheyenne. Approximately 7,500 acre-feet of water is below the pipes that bring water to Cheyenne. The BOPU calls this the dead pool and it is subtracted out from our readily available resources.

Hog Park is not included as water that is available to deliver to Cheyenne. Hog Park is part of the Little Snake/ Douglas Creek system and is used as trade water so that Cheyenne can collect water from Douglas Creek at Rob Roy Reservoir.
